Data Aggregation

This feature lets you import data from Aggregators like [Yodlee.com](#)
To use this functionality

1. Visit the aggregator site and create a new account.
2. Setup the banking accounts to extract at the aggregator site
3. Click the Add button on the right and specify the UserId and Password you used at the aggregator site

Note: The online banking, brokerage and electronic bill payment services which you may access via fnCentral Money Manager are provided by independent companies, which are solely responsible for their services to you. fnCentral Money Manager is not responsible for the services of independent providers.

Use account aggregation to download bank & credit card statements....

All the checked records will be imported. You may unselect a record, if you do not want it imported. All new transactions since last import are shown below.

fnCentral Money Manager performs **auto-categorization**, where it automatically selects the category that best matches the transaction. You can change the categories anytime. fnCentral Money Manager also extracts Payee information and performs validation on the imported data. Inconsistencies will be shown in red. We recommend that you check all categories and payees before importing.

Setup your categories

You can use categories and subcategories to better classify where your money is coming from and where it's going. It also helps you budget your income and expenses and compare budgeted amounts and track tax-related income and expenses. The finance manager comes with its own standard categories. You can add, delete, and modify these built-in categories to meet your needs.
